BEN LILLY ON THE WEST END

During the last decade or so, no peak or eminence of Uinta's West End has been excluded from the entertainment offered by Brown L. Keeling of Heber, Utah, and his cat trailing hounds. The hounds, of which he has had a hundred or so, could have been cold nosed black and tan, or hot nosed Plott. He has settled for the latter, having seven at this writing.

Bald Knoll, Mt. Heber, Currant Creek Peak, Reid's Peak, Bald Mt. with all its lookouts to Kamas Valley and over the Transition area have been alerted, amused, concerned, and worried, as this lone man with his ever faithful canines has bagged bobcats, cougars, and bears to the almost unbelievable number of "from 700 to 1,000." Of course these would be mostly cats.

How he has escaped the cold, blizzards, darkness, and fangs and claws of these maddened beasts of the wilds—we wonder. No less is the question—how has he escaped the blazing pages of the press? And how come he has done all this, while not one person out of a hundred, we dare say, who claim to have traversed these mountains, has ever seen one of these animals in the wild?

The last question is easily answered for many go through the Uintas without seeing their beauty or tasting their inspiration—they don't look for them. We find what we look for—faults or virtue, hatred or love.

Brown Keeling differs from he great Ben Lilly because conditions are different. Ben became famous in the South West, New Mexico, Arizona and Colorado as an intripid Grizzly and Wolf hunter. He camped on the trail to its end, stopping in caves each weekend where he Sabbathed with the Bible—one was cached in each of many different caves. He had no family—home was any place.

Our man has always been able to go and come. Good roads have led him to the tell-tale tracks. However, good judgment and strained endurance has sustained him well. But Alas! Times were when the exception hung on a spider web. Thanks to the faithfulness and innate understanding of man's best friend as they unrelentingly tore at the charging beasts, snatching long foaming fangs away in hair-breadth time.

To spend much of a life—from 8 years to 57 hunting with very little monetary renumeration has but one solution—innate love of the game and the solitude, in which it is environed. Yet some will say: "I am a hunter,"

Brown Keeling has a comfortable late model house just north of Heber. Call and see his trophies and enjoy his experiences first hand.

It was locust year in the mountains. Their shrill song was coming in confusing directions from almost every bush and aspen tree. This was the second time Syd had heard them—once he was five and now again. He was not aware that the eggs and larvae of cicada lie in the ground for seventeen years and then come forth in one grand horde.

Feeling that tie chopping and river driving were gone from his life forever and that life and the mountains were just budding in, the canyon seemed to drop behind him with a little objection. How he wished for the book on birds that Sadie had sent him—that he might hesitate and study. Sadie! Ah, that was the reason he was going so fast now, down the slope into Bear River's west Fork where he could fish and proceed on the morrow. He had already gathered a few cicadas for bait—he remembered his father had told him they were good.

The bleat of sheep fell upon his ears and of a sudden a big flat with sheep camp. "Hi" came a voice. Waiting a minute, Sydney heard the approaching horseman say: "Looks like you are traveling?" A short conversation let out the word—fish. "O, sure go right down there. We've got no hooks and we are getting—— tired of old ewe meat and deer. The native cutthroat, gaunt from spawning, were eager biters.
